OneDeskBiz

Your Tally. Live. Anywhere.

Real-time Tally data sync, business dashboards, outstanding follow-ups and reports on your phone and web - auto-updated every 5 minutes.

Product Design Document | Version 1.0 | November 2026

Vision & Brand

Why OneDeskBiz exists and how it looks

Problem

Tally data lives on one office PC. Owners, accountants and sales teams cannot see sales, stock or outstanding unless they are at that PC.

Solution

A lightweight agent reads Tally every 5 minutes and replicates changed data to the cloud. Anyone with access sees live numbers on mobile or web. Tally stays the single source of truth.

Target users

- Business owners - daily sales, cash, profit at a glance
- Accountants / CAs - multi-company access, reports
- Sales and collection teams - party outstanding, reminders
- Field staff - stock and rate lookup on the go

Brand palette

Desk Teal #0F766E

Midnight #0F172A

Ledger Amber #F59E0B

Cloud #F1F5F9

Typography

Headings: Inter / Poppins Bold

Body: Inter Regular, numbers in tabular style

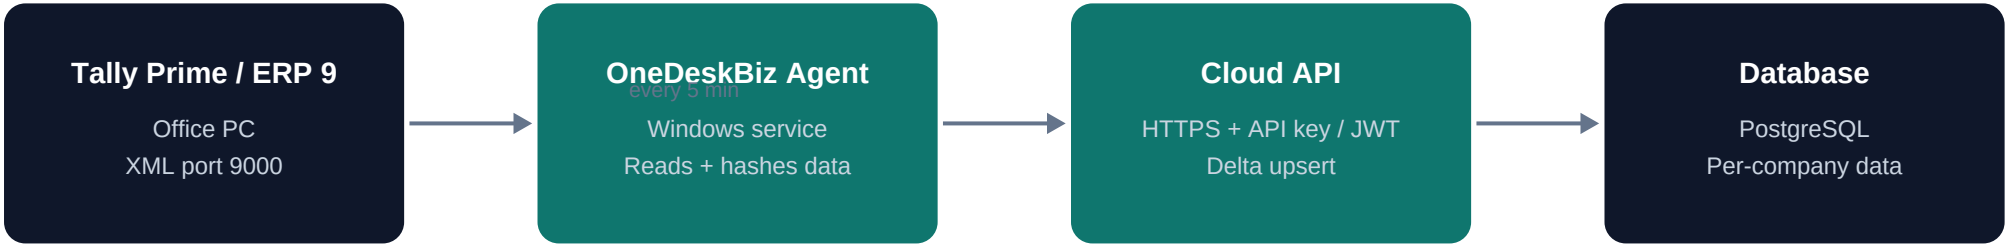
OneDeskBiz

Circle = one unified view. Amber line = the desk / ledger line.

System Architecture

How data moves from Tally to every device



Clients

Mobile App
Android / iOS

Web Dashboard
Owner + accountant

WhatsApp / SMS
Reminders, alerts

Reports
PDF / Excel export

Sync flow

1. Agent asks Tally for companies, ledgers, vouchers, stock (XML).
2. Each record is hashed; only new or changed records are sent.
3. Server upserts data and removes entries deleted in Tally.
4. Dashboards refresh automatically; last-sync time shown to user.
5. Failures retry with back-off; offline PC resumes on reconnect.

Modules & Features

What OneDeskBiz includes

Module	Description	Phase
Live Dashboard	Sales, purchase, cash/bank, profit, receivable and payable totals	MVP

Data, Security & Roadmap

Technical choices and delivery plan

Core data tables

- companies(id, name, last_sync)
- ledgers(company, name, group, opening, closing)
- vouchers(company, id, date, type, no, party, amount, narration)
- voucher_lines(voucher, ledger, amount)
- stock_items(company, name, unit, qty, rate, value)
- users(id, name, role) + user_companies(user, company)

Tech stack

- Agent: Python / .NET Windows service, auto-start
- API: FastAPI, PostgreSQL, Redis queue
- Web: React + Tailwind; Mobile: Flutter
- Hosting: AWS Mumbai region, HTTPS only

Security

- Outbound-only agent: no open ports on customer PC
- TLS in transit, encryption at rest, per-company API keys
- Role-based access, audit log, remote device logout

Roadmap

Phase 1 - MVP

Weeks 1-6

Agent, cloud sync, dashboard, outstanding, day book, ledger

Phase 2

Weeks 7-12

Stock, reports, invoice share, multi-user roles

Phase 3

Weeks 13-18

Alerts, WhatsApp reminders, order entry to Tally

Launch

Week 19+

Pricing plans, onboarding, support
